

- \* A high photon energy lamp that is safe for people. It falls below the FDA threshold limit value (THV) for human exposure, it's used to disinfect air and surfaces from
- \* microorganisms such as bacteria, mold and viruses.
- \* Microorganisms within aerosols (airborne particles) created by dental handpieces, talking, sneezing, coughing and other sources are destroyed in less than a second.

### **Dr. Mark DeGenova**

is pleased to announce the most advanced high-level disinfection system available anywhere in the world.

### **Introducing the Far-UV Sterilray**

A wall mounted fixture that provides direct high-level disinfection for air and surfaces in each operatory room.

## The Lamp Destroys Corona Viruses

### The Far-UV Sterilray Advantage:

- Produces up to 1000 times greater destruction than any other UV sources
- Produces high-level disinfection of room air and exposed surfaces.
- Destroys surface pathogens (MRSA, C. difficile, VRE) that routinely compromise the healthcare environment.
- Safe to use when the room is occupied during dental procedures
- Safe on skin as opposed to UVC which can cause erythema.
- Safe to look directly at, unlike conventional UVC.

The **SAFETY** of you the **PATIENT**, and the **OFFICE STAFF** is a priority.

### In addition to the **Sterilray** our office has implemented:

- **Dexis** digital X-ray equipment, which reduces patient radiation exposure by 92%
- All infection control guidelines and recommendations from the CDC, OSHA and the ADA.
- A self-contained pure water delivery system which gives you the cleanest handpiece water delivery system possible.
- **Molekule** air filtration units in each operatory, paired with a **Reme Halo UV-C** light whole office air purification inside the duct work of the office HVAC system.
- Additional night time conventional (254NM) UV-C lights are used for bacteria, spore and viral decontamination through-out the building in common areas when unoccupied.
